

AGILE

XP (EXTREME PROGRAMMING)

- Emphasizes TDD, pair programming, and continuous integration
- Small, frequent iterations (1-3 weeks)
- Test cases written before coding

SCRUM

- Focuses on management with roles (Product Owner, Scrum Master)
- Fixed-length sprints (2-4 weeks)
- Uses test quadrants for comprehensive testing

KANBAN

- No fixed iterations, focuses on continuous delivery
- Uses a Kanban board to track work-in-progress
- "Done-Done" concept ensures testing before completion

KEY TESTING ACTIVITIES

- Test case design based on user stories and acceptance criteria
- Frequent testing within each iteration
- Continuous feedback loop for improvement

CHALLENGES

- Test case design based on user stories and acceptance criteria
- Frequent testing within each iteration
- Continuous feedback loop for improvement
